DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1 and 9 have been allowed over the Osinki and Alferness prior art because they fail to teach the multiple discrete sections of the amplifying material and portions of the tuning material being separated from the discrete sections of the amplifying material by a distance greater than a charge diffusion length.

Claim 21 has been allowed over the Osinki and Alferness prior art because they fail to teach the amplifying material having a composition different from the composition of the first waveguide material, the amplifying material disposed in a parallel relationship proximate the first waveguide so as to be capable of amplifying light at the same time as the light propagates along the first waveguide of the directional coupler filter.

Claim 25 has been allowed over the Osinki and Alferness prior art because they fail to teach the amplifying material having a composition different from the composition of the first waveguide material, the amplifying material disposed in a

parallel relationship proximate the first waveguide so as to be capable of amplifying light at the same time as the light propagates along the first waveguide when a current passes from the electrode through the amplifying material.

Claims 3-8, 11-20, 22-24, and 26-28 have been found allowable due to their dependency on claims 1, 9, 21, and 25.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
